Amazon Order

Amazon wants to promote some of their products. Create a program for users to purchase items from the following menu:

Item Number	Item Name	Price
1	Amazon Echo	$29.99
2	Fire TV Stick	$39.99
3	Echo Show	$229.99
4	Amazon Cloud Cam	$119.99
5	AmazonBasics Microwave	$59.99

The program works as follows:

1) The user is prompted for their full name.
2) Greet the user "Hello" along with their name.
3) Show the menu of some of Amazon's products.
4) Ask the user if they want to purchase an item. The user can say yes or no.
5) If the user says no, then display "Have a nice day" and the program ends. If the user says yes, then get the item number for the item they would like to purchase.
6) Have the user enter in the quantity for the item they are purchasing.
7) Calculate the total of the purchase. Assume tax is 7.25% and shipping is $4.99.
8) Display the total of the purchase.
9) Ask the user to enter in their address for the package to be shipped.
10) Display "Thank you for your purchase!".
